Product Description:

Aston Martin V-8 Coupe Handling Package

Good as it is, technology has made it possible to dramatically improve the handling of your Aston.

Our custom engineered handling package will allow you to take full advantage of the wonderfully designed Aston Martin chassis. Shocks are changed in both rate and proportion Anti roll is increased Spring rates are increased for both front and rear.

The result of these changes is considerable: Handling is lighter and much more responsive Body roll during cornering is minimal Ride is firm but not uncomfortable. The weight transfer under braking is dramatically improved, thus improving braking abilities.

Our V8 Handling Package consists of a front bar, rear bar, front springs, rear springs, and front & rear shocks (adjustable for both ride height and stiffness).

A V8 Volante Kit is also available to order (Volante handling kit will NOT contain a rear anti roll bar)
