Product Description:

CRUISE CONTROL COMMAND MODULE

ON/OFF ON/OFF LAMPSET/ACCRES/DECCOAST 2 MEMORY PRESETS

This control allows you to tap up or tap down the set speed by 1kph/0.62mph.

The Cruise Control system has built-in safety features which will automatically disengage the system if one or more of the following occur:-

1. Depressing the brake pedal.
2. Press the OFF/Coast button of the command module/stalk.
3. Over-rev of the engine (requires clutch switch or RPM sensing to be installed).
4. Decelerating to below 75% of the set speed.
5. Over speed dropout at 150% above the set speed.
6. Brake light bulbs or brake light fuse failure.

Left hand side steering column stalk. This allows the cruise system to be switched on/off and to be set to the required speed with an up/down control. It also has 2 memories that allow the vehicle speed to be set to previously stored value
