

DB6 CYLINDER BLOCK

048-001-0001AW

£13912.10
£16694.52 inc VAT

Product Description:

- CNC machined in-house to exacting tolerances
- Amalgamation of over 3 years in house development
- Cast in the UK by the World's leading foundry
- Accuracy of machining, premium finish and quality
- Fine engineering tolerance due to the latest equipment
- Integral, 4 Stud, main bearing caps
- 3D machined, billet main bearing caps
- Compatible with O/E Components
- Unrivalled quality and attention to detail
- End result a more efficient and reliable engine
- Competitively priced
- Supplied in various configurations
- Supported by a comprehensive Aston Workshop guarantee
- International shipping available

Having struggled for many years to obtain a consistent, high-quality supply of cylinder blocks for our world leading restorations and engine build projects, it was decided that we would manufacture our own - Aston Workshop Cylinder Blocks. This would guarantee both quality and continuation of supply long into the future.

After a yearlong feasibility study, it was decided that the project should be carried out, in line with the Aston Workshop ethos of "In House" this allows us to control the quality here on site, without compromise.

We teamed up with a highly prestigious UK company, to provide the patterns/raw castings. From the raw castings we would carry out all* the other processes in-house.
